

END-TO-END IT SERVICES

Expertise and technology that moves you forward.

Applications

Methodology & transformation, DevSecOps, application development, cloud migration, and quality assurance & testing (QAT)

Optimization

Business process management, intelligent automation (including robotic process automation), and business analytics

Advisory

Strategy; roadmap; enterprise architecture; management reform; change management & training; governance; and portfolio, program, and project management

Operations

Infrastructure and operations management and information security and assurance

Applied Info Science

Advanced statistical and mathematical methods, experimental design and implementation, scientific programming/bioinformatics, and preparation for publication

Our services are designed to provide a coherent framework for our government and commercial customers.

We learn your business and listen to your needs now and in the future. Our solutions use critical business performance and process information to create and deliver timely, targeted, high-value solutions.

We'll help you accelerate and optimize digital transformation, migrate to the cloud, automate, and thrive in today's e-world.

Simplifying complexity—from process automation to effective change management, actionable architecture, and holistic solutions—is central to our clients' success.

Our services and technologies align to your needs. We listen to your root issues and consider your situation and goals. We're interested in cultivating a partnership that supports your success over the long term.

Delivering value early and often lets you avoid costs, mitigate risks, and stay focused.

OUR SERVICE PHILOSOPHY

We're Partners in Your Success, Whatever Your Business.

BRMi serves both private and public sectors, from the national security establishment to monetary and financial institutions, statistical and regulatory bodies, and many others. A few of our successes ...

Mobile Field Application

U.S. Department of
Homeland Security

We used mobile web technologies to create an app that enables immigration, customs, and border patrol agents to electronically submit inventories of their sensitive assets using an Android or iOS smartphone. Agents in the field now spend considerably less time on this administrative function and fewer headquarters staff are needed to correct errors and match asset inventory records, saving thousands of hours of staff time each year.

Business Process Models

U.S. Citizenship and
Immigration Services

We applied our business process management and reengineering expertise to create a suite of standardized performance management processes, products, and services. We validated the to-be business process models, developed a roadmap to modernize and improve the delivery of USCIS services, and created an enterprise metadata model. Our products helped successfully streamline processes and prioritize investments and initiatives.

Enterprise Architecture

Pension Benefit Guaranty
Corporation

We unified and completed an actionable enterprise architecture with PBGC's chief architect to provide value-add services to PBGC's internal and external customers. Our contributions improved PBGC's ability to accomplish its strategic goals. Our work was used to demonstrate substantial progress in PBGC's update to the Government Accountability Office on the actions taken in response to their recommendations.
